

ABSTRACT:

[0132] One embodiment of the present invention includes a system of bundling products comprising a set of computer instructions stored on a computer readable medium and executable by a computer processor, the set of computer instructions comprising instructions executable to, receive a set of resources; compare the set of resources to one or more applicable bundle patterns; and generate one or more bundled packages based on the comparison. In one embodiment of the present invention, the set of resources can be a raw package that represents the cross product of solutions designed to meet a user's defined needs. Another embodiment of the present invention can include receiving a set of resources, comparing the set of resources to one or more applicable bundle patterns, and generating one or more bundled packages based on the comparison.
